HW4 Phase out by end of 2021

Dear customer, Dear partner

Due the technical capabilities and it's limitation to the software structure, the HW4 V3.9 reaches it last state of the product life cycle and will be phased out by 2021.

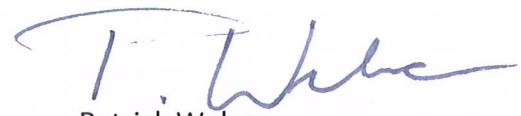

In the meantime ROTRONIC will develop a software which is capable to perform basic key features. For customer which have monitoring application it is highly recommended to switch to the Rotronic Monitoring System (RMS).

The support for the HW4 will be guaranteed until 2023.

If you have any question please do not hesitate to contact us.

Confirmed by the manufacturer

Andreas Gähwiler
CEO ROTRONIC

Patrick Weber
Head of Product Management
